Superstars!

Today we learned about animals that adapt in the winter and focused on the animals we see around our homes (deer, rabbits, squirrels etc.). The children enjoyed learning that the white rabbit uses the snow to blend in and hide from predators. We also talked about how the animals find food such as seeds and brightly colored berries and how they stay warm in the evergreen trees.

Outside we had sledding races on the hill and looked for food that the animals can eat during the winter. We thought it would be nice to uncover some grass to help the animals find food outside our school too!
